College Event Registration Mobile App

1. Introduction

The College Event Registration Mobile App is a user-friendly mobile application prototype designed using Figma. The purpose of the application is to simplify the process of discovering and registering for college events. Many colleges still rely on manual registration methods, notice boards, or social media groups for event announcements, which can be inconvenient for students. This application provides a centralized platform where students can easily browse events, view details, and manage their registrations.

2. Problem Statement

Students often face difficulties in finding information about upcoming college events and completing registrations through traditional methods. Common issues include:

- **Missing event announcements.**

- **Complicated registration procedures.**
- **Lack of centralized event information.**
- **No easy way to track registered events.**
- **Delayed confirmation of registration.**

The goal of this project is to create a simple and efficient solution that improves the event registration experience for students.

3. Design Thinking Process

Empathize

The needs of students were analyzed to understand the challenges they face while registering for college events. Students require a quick and organized way to discover and join events.

Define

The main problem identified was the absence of a centralized, easy-to-use platform for event registration and event tracking.

Ideate

Several solutions were considered, including event categorization, search functionality, registration tracking, and simplified navigation.

Prototype

The application screens were designed using Figma. Wireframes were first created and later converted into a high-fidelity prototype with colors, icons, and interactive elements.

Test

Basic usability testing was conducted by reviewing the design and identifying areas where user experience could be improved.

4. User Persona

Name:

Rahul Sharma

Age:

19 Years

Course:

B.Tech Computer Science

Goals:

- **Find upcoming college events easily.**
- **Register quickly without lengthy forms.**
- **Track registered events in one place.**

Frustrations:

- **Missing event announcements.**
 - **Confusing registration processes.**
 - **Lack of event tracking options.**
-

5. Application Screens

Home Screen (Campus Events)

The Home Screen serves as the main dashboard of the application.

Features:

- **Displays all available college events.**
- **Event category filters such as Technical, Cultural, Sports, and Workshops.**
- **Search functionality for easy event discovery.**
- **Event cards showing:**
 - **Event name**
 - **Date and time**
 - **Venue**
 - **Available seats**
 - **Event category**

This screen helps students quickly browse and discover events relevant to their interests.

My Events Screen

The My Events screen allows students to manage events they have registered for.

Features:

- **Upcoming Events tab.**
- **Past Events tab.**
- **Empty state message when no events are registered.**
- **"Explore Events" button to navigate back to available events.**

This screen improves user experience by providing a dedicated area for event tracking.

Profile Screen

The Profile section provides access to student account information and personal settings. It allows users to manage their profile details and application preferences.

6. User Interface Design

The interface was designed with the following principles:

- **Clean and modern layout.**
- **Consistent color scheme.**
- **Easy navigation.**
- **Clear information hierarchy.**
- **Mobile-friendly design.**

The color palette uses blue tones to create a professional and trustworthy appearance while maintaining visual simplicity.

7. Interactive Prototype

Interactive navigation was created in Figma to simulate the actual application experience.

Navigation Flow:

Home Screen → Event Details → Registration → Confirmation

Bottom Navigation:

- **Home**
- **My Events**
- **Profile**

This allows users to move seamlessly between different sections of the application.

8. User Testing and Feedback

Basic user testing was performed to evaluate usability.

Feedback Received:

- **Navigation should be simple and intuitive.**
 - **Event details should be visible at a glance.**
 - **Buttons should be easily accessible.**
 - **Empty screens should provide guidance to users.**
-

9. Improvements Made

Based on the feedback, the following improvements were implemented:

- **Added category filters for easier event discovery.**
- **Improved button visibility and placement.**
- **Enhanced screen layout for better readability.**
- **Added empty-state messaging in the My Events section.**
- **Maintained consistent navigation across screens.**

These improvements enhanced the overall user experience and usability of the application.

10. Conclusion

The College Event Registration Mobile App successfully addresses the challenges associated with traditional event registration methods. By providing a centralized platform for browsing, registering, and managing events, the application improves convenience and accessibility for students. The project demonstrates the effective application of Design Thinking principles and modern UI/UX design practices using Figma.
